

Animal Health Ireland (www.animalhealthireland.ie) is a not-for-profit, public-private partnership, tasked with controlling livestock diseases not subject to international regulation, with the objective of improving the profitability and sustainability of Irish farmers and the agri-food sector. The advice provided by AHI is developed by a number of Technical Working Groups and the delivery of its major programmes is overseen by cross-industry Implementation Groups, according to annual business plans and a multi-annual strategic plan.

AHI is currently recruiting to fill the vacancy of Beef HealthCheck Programme Manager (Ref: AHI/BHC).

The Beef HealthCheck programme has developed tools to assist farmers and their veterinary practitioners to control losses due to liver fluke and pneumonia through capture, analysis and reporting of abattoir data from post mortem meat inspection. The Programme Manager will be responsible for all operational aspects of the programme and will contribute to its strategic development.
